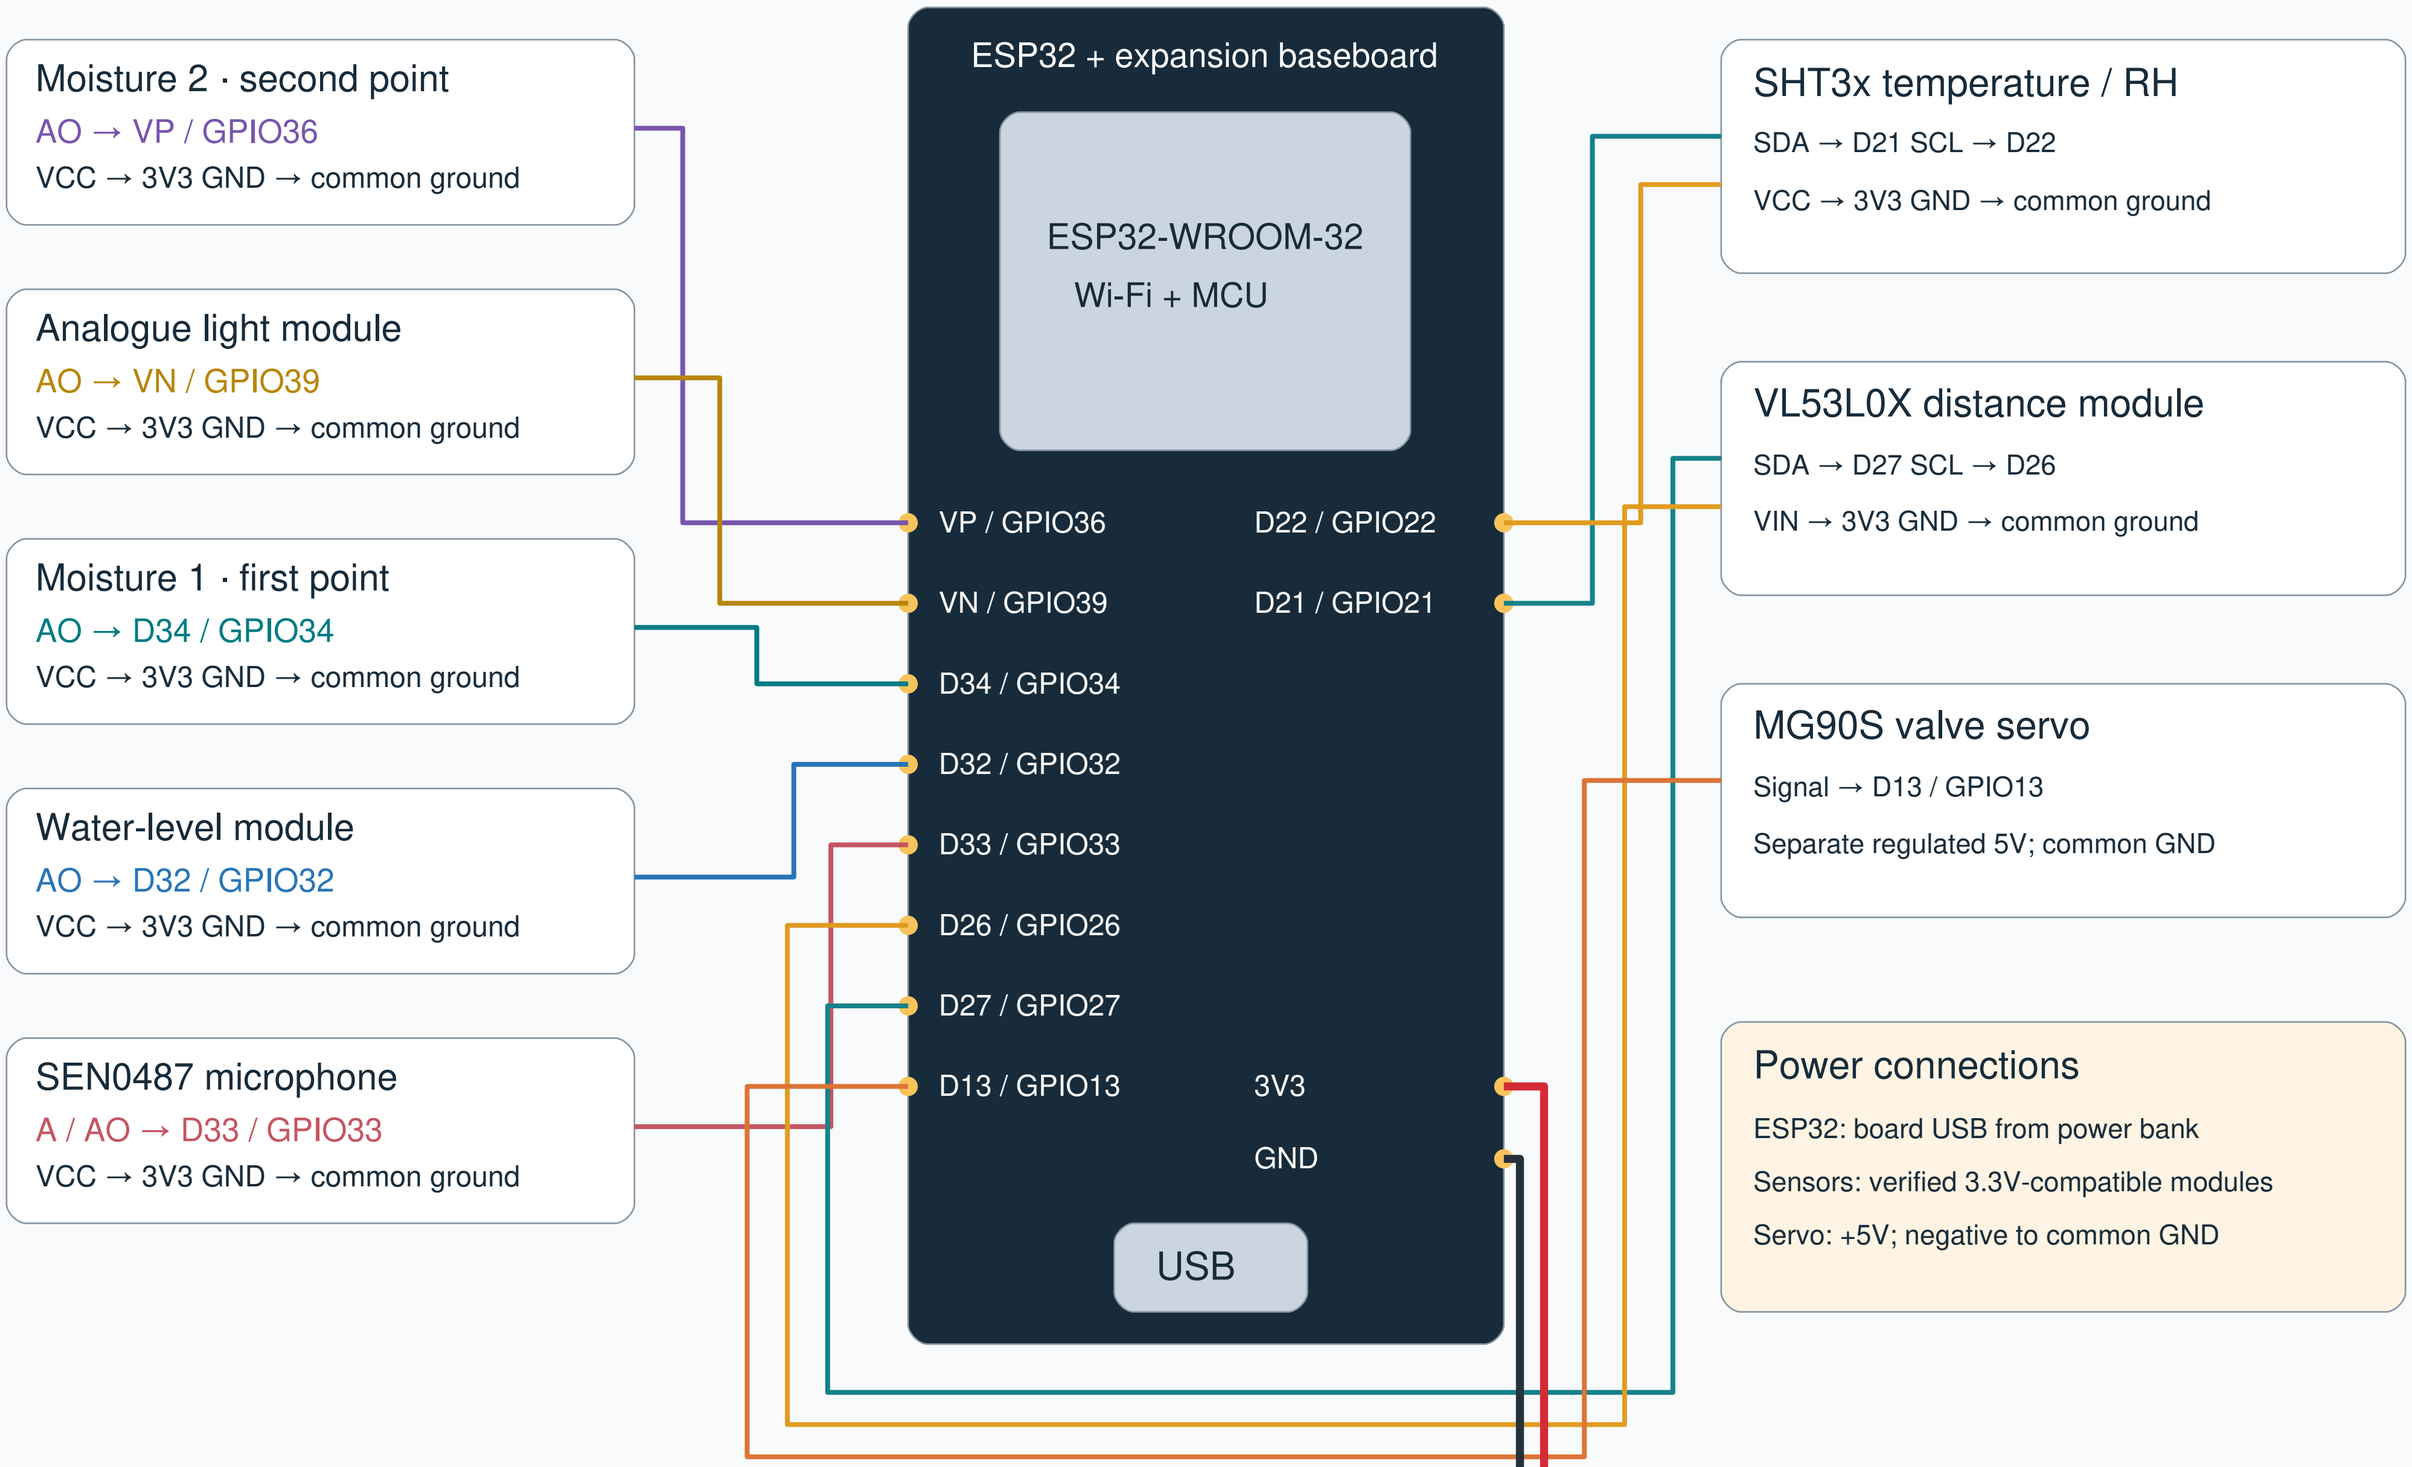
HollowHaven · ESP32-WROOM-32 Wiring

Photo labels; firmware cad07a9. USB faces down. Connection diagram, not the baseboard circuit schematic.



Match signal, supply and ground at both ends. Actual wire colours do not establish function.

V-rail voltage, yellow jumper and S/V/G order are unconfirmed: check continuity off, then voltage on.

VCC/GND labels are required connections. Join same-name nets. Never connect servo 5V to 3V3.

DS18B20, D35 and TX0/RX0 are unused here. VP = GPIO36; VN = GPIO39.
